SUMMARY

Full-stack developer with 7+ years of experience building APIs, microservices, and integration layers — mostly in Java and Spring Boot, across fintech and banking products. I care about clean API contracts, systems that don't break under change, and tests that actually mean something. Currently at Nakisa on the General Ledger module; before that I owned multiple backend modules end-to-end at MyMonty. I hold a Master's in GIS & Data Science and have been actively learning AI engineering — working through LLMs, RAG, and embeddings on the side — areas I'm genuinely interested in bringing into my work.

EXPERIENCE

Software Developer · *Nakisa Inc.*

May 2025 – Present · Montréal

- Work on the General Ledger module within Nakisa's enterprise finance platform, building features used by large organizations for financial reporting and close management.
- Delivered the Financial Close Connector as part of the financial close automation workflow.
- Handle feature development, bug fixes, and code reviews in a product-focused Agile team.

Stack: Java · Spring Boot · Vue.js · TypeScript · MySQL

Full-Stack Developer · *MyMonty (Monty Mobile)*

Nov 2022 – Apr 2025 · Remote

- Owned multiple backend modules — Card Manager, Exchange Manager, and other integration services — from API design through production support, with full accountability end-to-end.
- Designed integration layers flexible enough to onboard new payment providers without breaking existing contracts.
- Shipped 30+ RESTful APIs and microservices in Spring Boot, documented with OpenAPI/Swagger.
- Introduced Redis caching in the onboarding flow, measurably reducing integration round-trip times.
- Wrote JUnit + Mockito tests focused on real behavior and edge cases, not just coverage numbers.
- Used RabbitMQ for async request queuing and Firebase for Android push notifications.
- Managed schema evolution with Liquibase across SQL Server and MySQL; worked with JPA for ORM.
- Mentored an intern from scratch to contributing independently within a few weeks.
- Agile sprints with Jira, Git, Docker. Spent time with Prometheus, Fluentd, and Grafana in test environments to understand production observability.

Stack: Java · Spring Boot · SQL Server · MySQL · Redis · RabbitMQ · Docker · JUnit · Mockito · Liquibase

Software Developer · *Capital Banking Solutions*

Oct 2021 – Oct 2022 · Lebanon

- Built enterprise banking applications on Oracle ADF and Spring Boot.
- Designed and implemented the database layer with Oracle DB and PL/SQL.
- Ran code reviews with a focus on catching issues early and keeping quality consistent.

Stack: Java · Spring Boot · Oracle ADF · Oracle DB · PL/SQL

Software Engineer · *Cedar IT Services*

Nov 2019 – Aug 2021 · Lebanon

- Delivered features for banking clients including Banque du Liban and Al Rajhi Bank, working directly with stakeholders to turn requirements into working software.
- Built across Java, JSF, and Spring Boot with Oracle DB — contributed to 10+ features that met full client specs.
- Maintained and improved existing modules across multiple client environments.

Stack: Java · Spring Boot · JSF · Oracle DB

PROJECTS

Real Estate Price Prediction — Lebanon · *Master's Capstone · Esri Lebanon collaboration*

- Built an end-to-end ML pipeline: scraped listings with BeautifulSoup and Selenium, enriched the dataset with spatial analysis in ArcGIS/ArcPy, trained and compared multiple models with Optuna hyperparameter tuning.
- Delivered a full model performance analysis and a simple HTML/CSS/JS interface for testing predictions interactively.

Stack: Python · ArcGIS · ArcPy · BeautifulSoup · Selenium · scikit-learn · Optuna

Personal Portfolio Website · mohamadnaji.dev

- Built and deployed on a self-managed Contabo VPS behind Nginx, with SSL, UFW firewall config, and a custom domain.

Stack: React · Nginx · HTML/CSS

Base Station Configuration · *Bachelor's Thesis*

- Built an antenna recommendation system using dynamic programming, cutting filtration computation time drastically. Full web UI with jQuery and Bootstrap on a MySQL backend.

Stack: PHP · Laravel · jQuery · Bootstrap · MySQL

EDUCATION

M.S. — GIS and Data Science

2022 – 2024

Lebanese University, Beirut

Coursework: Python, Deep Learning, Neural Networks, Big Data, NLP, Remote Sensing, Spatial Analysis

B.S. — Computer Science

2016 – 2019

Lebanese University, Beirut

Coursework: Java, Design Patterns, Data Structures, Databases, Operating Systems, Parallel Programming

SKILLS

Core: Java, Spring Boot, REST API Design, Microservices, SQL (Oracle, MySQL, SQL Server)

Backend tooling: JUnit/Mockito, Liquibase, JPA/Hibernate, RabbitMQ, Redis, Docker, Maven, Git, Swagger/OpenAPI

Frontend: Vue.js, TypeScript, React, Angular, jQuery, HTML/CSS/JavaScript

Data & ML: Python, scikit-learn, Optuna, SpaCy/NLTK, ArcGIS Pro · Currently exploring: LLMs, RAG, embeddings

Observability: Prometheus, Grafana, Fluentd (test environments)

Languages: English · French · Arabic

CERTIFICATIONS

- Esri Lebanon: Spatial Analysis with ArcGIS
- Esri Lebanon: Python for Geospatial AI
- Esri Lebanon: Geodatabase Concepts — Design and Modeling
- Esri Lebanon: Creating and Sharing GIS Content Using Web GIS
- Building Modern Web Applications with Angular
